# DESMA Elastomertechnik takes over the business activities of Berger Bürstmaschinenbau GmbH & Co. KG

29.06.2023 #automation #injection molding machines

On January 1, 2023, the business activity of Berger Bürstmaschinenbau GmbH & Co. KG was taken over by Klöckner DESMA Elastomertechnik GmbH and in the meantime the entire production at the headquarters in Fridingen has been integrated.

DESMA continues to expand the area of automation technology for its own injection molding machine program and can now serve all essential components for automation solutions from its own production. Together with the in-house mold construction at the locations Germany, USA, India and China, complete production solutions are realized from one source and under one roof.

DESMA also takes over the complete spare parts supply of all Berger brush systems available on the market.

autor: Klöckner DESMA Elastomertechnik GmbH

## DESMA DESMA Slovakia, s.r.o.

Injection molding machines for injection molding of technical rubber and silicone parts, peripherals, molds and automation systems, cold inlets, machines for plastics and rubber.
